- Continuing to expand expertise in Reactjs ,Nodejs, Springboot ,aws buckets and cloudinary, etc.
- Collaborating with cross-functional teams to deliver high-quality software solutions.
- Actively contributing to project planning, feature development, and problem-solving.

## PROJECTS I HAVE WORKED ON

### MSP ACADEMY (Frontend,Nextjs)

MSP Academy is a platform designed to connect students who need assistance in completing their projects or assignments with individuals who are willing to provide help in exchange for payment. The platform serves as a marketplace where students can post their tasks and outline their requirements, while experts, freelancers, or professionals can offer their services to complete these assignments.

### ShofyDrop (Frontend, Nextjs)

Shofydrop is a multivendor eCommerce platform that connects multiple vendors with customers in their nearby locations, offering home delivery and pickup options. This platform allows vendors to showcase their products, and customers can browse and purchase items from a variety of sellers in their local area. By integrating local vendors, Shofydrop provides customers with the convenience of discovering products close to them.

### Kagosida (Backend,Nodejs)

Kagosida is a web application designed to display the latest gold and silver rates. The platform provides users with up-to-date information on the buying and selling rates of these precious metals, allowing individuals and businesses to monitor market rates.

### Everest Fitness(Frontend,Nextjs)

Everest Fitness is an eCommerce site specializing in fitness and health supplements, as well as gym equipment. The platform caters to fitness enthusiasts, athletes, and individuals seeking to improve their health by offering a wide range of products that support physical fitness goals.

## PERSONAL PROJECTS

### MEME-GENERATOR

meme generator is a simple web app where we can generate random meme image add text to it and save or share it. Reactjs is used for frontend and images are generated using imgflip API.
